Flight Operations Segment (FOS) Release A Version Description Document (VDD) for the ECS Project

Version 1.01

November 12, 1996

Prepared Under Contract NAS5-60000

SUBMITTED BY

R. E. Clinard /s/   11/12/96

Robert E. Clinard, ECS CCB Chairman   Date
EOSDIS Core System Project

Hughes Information Technology Systems
Upper Marlboro, Maryland

This page intentionally left blank.

Preface

This preliminary document accompanies the delivery of the Earth Observing System (EOS) Flight Operations Segment (FOS) Version 1.00 software and hardware for the ECS project. It is not a formal deliverable and does not require Government approval. However, it has been placed under configuration control by the EOSDIS Core System (ECS) Change Control Board (CCB). Changes to this document shall be made by document change notice (DCN) or by complete revision.

Any questions regarding distribution should be addressed to:

Data Management Office
The ECS Project Office
Hughes Information Technology Systems
1616 McCormick Dr.
Upper Marlboro, MD 20774

This page intentionally left blank.

Abstract

This document describes the delivery contents of the FOS components including commercial off-the-shelf (COTS) software, Version 1.00 of custom FOS software, and accompanying documentation.

The purpose of this document is to describe the contents of the FOS delivery. It briefly describes the capabilities of the product, provides an inventory of the delivery, lists unresolved problems, and addresses issues such as special operating instructions, and disclaimer notices for public domain software used in the product.

Keywords: CCB, deliver, EOC, ECL, description, instructions, inventory, FOT, FOS, manual, operations, problems, release, software, tools, user's, version, 1ST

This page intentionally left blank.

1. Introduction

1.1 Identification of Document

This is a Version Description Document (VDD) prepared using NASA-STD-2100-91 (NASA-DID-P500, NASA form DD250) as a guide. It is submitted as part of Flight Operations Segment (FOS) delivery for the Earth Observing System Data and Information System (EOSDIS) Core System (ECS), contract number NAS5-60000.

1.2 Scope of Document

This document describes the delivery contents of the FOS components including commercial off-the-shelf (COTS) software, Version 1.00 of custom FOS ECS software, and accompanying documentation.

1.3 Purpose and Objectives of Document

The purpose of this document is to describe the contents of the FOS delivery. It briefly describes the capabilities of the product, provides an inventory of the delivery, lists unresolved problems, and addresses issues such as special operating instructions, system limitations, and disclaimer notices for public domain software used in the product.

1.4 Document Status and Schedule

This VDD is submitted as a preliminary document. The preliminary version of this VDD will be used for Acceptance Testing of Release A of the FOS.

The final document is scheduled for delivery thirty days after the Release Readiness Review (RRR). Any changes to the product that require a subsequent version of this document to be released will be described in a new VDD.

1.5 Document Organization

The format and contents of this document comply with NASA-DID-P500 and NASA-DID-999 as defined in NASA-STD-2100-91.

- Introduction — Introduces the VDD scope, purpose, objectives, status, schedule and document organization.

- Related Documentation — Provides a bibliography of reference documents for the VDD organized by parent and binding subsections.

- Product Description — Describes the general capabilities and product contents.

- Inventory — Lists product inventory including COTS and custom FOS software (contents of tar file).

- Non-conformance Status — Discusses known problems with the FOS software and lists Non-conformance Reports with an open status.

- Appendices — Contain supplemental information such as: build/installation instructions, problem reporting, and public software disclaimer notices.

- Abbreviations and Acronyms — Contains an alphabetized list of the definitions for abbreviations and acronyms used in this volume.

2. Related Documentation

2.1 Parent Document

The parent documents are the documents from which the scope and content of this document is derived.

423-42-01	EOSDIS Core System Statement of Work - CN10
423-41-02	Goddard Space Flight Center, Functional and Performance Requirements Specification for the Earth Observing System Data and Information System (EOSDIS) Core System (ECS)
NASA-STD-2100-91	NASA Software Documentation Standard, Software Engineering Program

2.2 Applicable Documents

The following documents are referenced within this document, or are directly applicable, or contain policies or other directive matters that are binding upon the content of this volume.

194-207-SE1-001	System Design Specification for the ECS Project
304-CD-001-003	Flight Operations Segment (FOS) Requirement Specified for the ECS Project, Volume 1: General Requirements
305-CD-040-001	Flight Operations Segment (FOS) Design Specification for the ECS Project (Segment Level Design)
307-CD-001-003 329-CD-001-003	Flight Operations Segment (FOS) Release Plan and Development Plan for the ECS Project

2.3 Information Documents

The following documents are referenced herein and, amplify or clarify the information presented in this document. These documents are not binding on the content of the Version Description Document.

222-TP-003-008	Release Plan Content Description for the ECS Project
320-WP-001-001	Flight Operation Segment (FOS) Commercial-off-the-Shelf (COTS) Hardware for Release A
604-CD-001-004	Operations Concept for the ECS Project: Part 1: - ECS Overview
604-CD-004-001	ECS Operations Concept for the ECS Project: Part 2, FOS
609-CD-005-001	Flight Operations Segment (FOS) Operations Tool Manual
SD-1-014	Software Nonconformance Reporting Project Instruction

3. Product Description

This section describes the product capabilities of the FOS ECS software.

3.1 Product Description and General Capabilities

FOS will be deployed November 1996 at one of the Distributed Active Archive Centers (DAACs) - Goddard Space Flight Center (GSFC). It will be an incremental release of the ECS software leading to Release A.

FOS is responsible for mission operations, including the planning, scheduling, commanding, and monitoring of US EOS spacecraft and US EOS instruments onboard the US and International Partner (IP) series of spacecraft. FOS is composed of the EOS Operations Center (EOC) located at GSFC and Instrument Support Toolkit (IST) associated with the Principal Investigations (PIs) and Team Leaders (TLs).

Nine subsystems have been defined to support flight operations. Individually these subsystems perform specific, unique functions; collectively, they provide a set of interrelated services for the Flight Operations Team (FOT) and the IST user community. These subsystems are:

1. Analysis Subsystem (ANA)

2. Command Subsystem (CMD)

3. Command Management Subsystem (CMS)

4. Data Management Subsystem (DMS)

5. FOS User Interface Subsystem (FUI)

6. Planning and Scheduling Subsystem (PAS)

7. Real-Time Contact Management Subsystem (RCM)

8. Resource Management Subsystem (RMS)

9. Telemetry Subsystem (TLM)

The following sections describe the product capabilities in further detail.

3.1.1 Analysis Subsystem (ANA)

The ANA subsystem provides statistics generation, User Supplied Algorithm processing, a Decision Support System (DSS), Routine Request Processing, Carryout Data, and Clock Correlation Process. The ANA subsystem is responsible for managing the on-board systems and for the overall mission monitoring. Its functions include performance analysis and trend analysis. It also cooperates with Telemetry to support fault detection and isolation.

814-RD-007-002

3.1.2 Command Subsystem (CMD)

The CMD subsystem consists of three processes: Format Command, Frame Operation Procedure (FOP) Command, and Transmit Command. Format Command receives and validates command directives. FOP Command builds command link transmission units (CLTUs) according to the Consultative Committee for Space Data Systems (CCSDS) standard. Transmit command forwards the CLTUs at a specified uplink rate. CMS is responsible for transmitting command data (i.e., Real-Time commands or command loads) to EDOS for uplink to the spacecraft during each real-time contact. Command data can be received in real-time by the operational staff or as preplanned command groups generated by Command Management. The CMD subsystem is also responsible for verifying command execution on-board the spacecraft.

3.1.3 Command Management Subsystem (CMS)

The CMS subsystem contributes a Schedule Controller process, a Command Model process, a Spacecraft Model process, a Ground Schedule process, and a Load Catalog process. CMS manages the preplanned command data for the spacecraft and instruments. Based on inputs received from Planning and Scheduling, Command Management collects and validates the commands, software memory loads, tables loads, and instrument memory loads necessary to implement the instrument and spacecraft scheduled activities.

3.1.4 Data Management Subsystem (DMS)

This subsystem provides the Project Data Base Management processes, Event Processing, Telemetry Archive Process, Ground Telemetry Archive Process, and External Interface Processes. DMS is responsible for maintaining and updating the Project Data Base (PDB) and the FOS history log.

3.1.5 FOS User Interface Subsystem (FUI)

This provides graphical user interface services for all of the FOS subsystems. FUI provides character-based and graphical display interfaces for FOS operators interacting with all of the aforementioned FOS subsystems.

3.1.6 Planning and Scheduling (PAS)

This produces a conflict-free schedule of activities for spacecraft resources. PAS integrates plans and schedules for spacecraft, instruments, and ground operations. Planning and Scheduling provides the operational staff with a common set of capabilities to perform "what-if" analyses and to visualize plans and schedules.

3.1.7 Real-Time Contact Management Subsystem (RCM)

This receives and processes messages from NCC during contact. It also sends request messages to NCC during contact. Status messages are also received and processed from EDOS during

contact. RCM is responsible for managing the real-time interface with the NCC and EDOS, as well as with the DSN station, as applicable.

3.1.8 Resource Management Subsystem (RMS)

This provides multiple operators access to the same data stream. It also ensures a single point of command for a specific spacecraft. RMS provides the capability to manage and monitor the configuration of the EOC. This includes configuring the EOC resources for multi-mission support; facilitating operational failure recovery during real-time contacts.

3.1.9 Telemetry Subsystem (TLM)

This provides telemetry decommutation. It also provides for memory dump and spacecraft state checks. TLM receives and processes housekeeping telemetry (in CCSDS packets) from EDOS. After the packet decommutation, the telemetry data is converted to engineering units and checked against boundary limits.

814-RD-007-002

4. Product Inventory

Delivery of FOS consists of commercial-off-the shelf (COTS) software, shareware software and custom ECS software. This section provides details of these components.

4.1 Inventory of Materials

4.1.1   Documentation

The document provided with this release is:

Document Number: 320-WP-001-001
Title: Flight Operation Segment (FOS) Commercial-off-the-Shelf (COTS)
                                 Hardware for Release A
Delivery Source: Hardcopy, WEB
Summary: This document includes descriptions of the hardware, network diagrams,
                                 and COTS

4.1.2 Archive Tapes

The following magnetic tape is used to archive the delivered baseline configuration of the developed software.

904-PR- PR-025-001
Label: FOS_v1.0_111196 Distribution Date: November 11, 1996
>>> 5.0gbyte format (high density) <<<

FOS_v1.0_111196.tar

All documents (VDD and User's Guide)
Command to untar tar tape: tar xvf ##
Command to untar tar file: tar xvf file.tar
where ## = your tape device and file.tar = Name you give tar file

4.1.3 Utility and Support Software

The Utility and Support Software are included as part of the FOS Custom Software (refer to section 4.2.1).

4.1.4 COTS Software Inventory

FOS uses the existing Version 0 Wide Area Network (WAN) to transport data between sites. It uses the existing Version 0 LAN infrastructure to support local networking at the GSFC DAAC.

Table 4-1 summarizes the deployed COTS software at GSFC. Refer to *Flight Operation Segment (FOS) Commercial-off-the-Shelf (COTS) Hardware for Release A* (320-WP-001-001) for the physical mapping of FOS Release A COTS hardware to COTS software.

4.2 FOS Custom Software

FOS custom software consists of a number of components. Ten subsystems are required to make a complete FOS build. The software is available for the following architectures:

- DEC
  OSF 3.2

- SUN
  Sun Solaris 2.4

A file listing maybe generated from the delivered tar file using the tar -tvf command.

4.2.1 FOS Custom Software Version 1.00 Tar File Listing

The following listing provides the files generated by the build process and the installation process. All of the run time executables are located in the /fos/test/am1/bin area. For the SUN platform the executables are located in the sun_sparc_5-4 subdirectory to /bin (e.g., the DynamicPage executable is located at /fos/test/am1/bin/sun_sparc_5-4).

5. Non-Conformance Status

5.1 Known Problems with FOS

This section contains the list of problems closed (section 5.2) and known problems (section 5.3) as of 11/7/96 in the product. These problems were found and recorded during unit and integration testing and captured in the formal problem tracking system, Distributed Defect Tracking System (DDTS). The DDTS system generated the attached list of "open" NCRs. This list has been reviewed by HITC management and the FOS system is considered to be acceptable for delivery at this time. The list includes the NCR ID, Software, Title, Severity, and Problem description. DDTS problem severity definitions, on a 1-5 scale, are defined as follows:

1. Catastrophic bug without workaround that causes total failure or unrecoverable data loss. Example: system crash or lost user data.

2. Bug which severely impairs functionality. Workaround might exist but is unsatisfactory. Example: can not use major product function.

3. Bug that causes failure of noncritical system aspects. There is a reasonably satisfactory workaround.
   Example: user data must be modified to work.

4. Bug of minor significance. Workaround exists or, if not, the impairment is slight. Example: error messages are not very clear.

5. Very minor defect. Workaround exists or the problem can be ignored. Example: bad layout or misuse of grammar in manual.

5.2 FOS Non-Conformance Reports (Closed Status)

This is the first delivery of the software and this section is not applicable.

5.3 FOS Non-Conformance Reports (Open Status)

The following NCRs are liens against the FOS Version 1.00 delivery.

NCR ID: ECSed03872
Software: DMS
Title: Command ODF hex to decimal conversion not being done properly
Severity: 1
Problem: The command database tables store data in ASCII hex representation. The odf generation interprets the ASCII hex representation as ASCII decimal. This causes the binary for the commands to be incorrect.

NCR ID: ECSed03987
Software: CMD
Title: submnemonics not converted ASCII to binary
Severity: 1
Problem: Submnemonics from FUI to command format are in ASCII and need to be converted to binary before insertion in to the command. This is not being done and the commands are not being properly built.

NCR ID: ECSed04434
Software: ANA
Title: Could not generate a stats request: data file comes back empty
Severity: 1
Problem: The user tried to generate a user-specified statistics request. The request was generated but the statistics files in /fos/test/am1/datasets was empty. F-ANA-03050 F-ANA-05250

NCR ID: ECSed01944
Software: FUI-B
Title: ECL Directive PAGE CLOSE
Severity: 2
Problem: ECL directive "PAGE CLOSE" caused Environment Controller, mini-Control Window and String Manager Jr. processes to crash. Had to rerun script to restart these processes.

NCR ID: ECSed02452
Software: PAS-B
Title: Executables and source code outside accepted directory structure
Severity: 2
Problem: Executables and source code are being delivered outside the accepted directory structure guidelines - Code has not been inspected and unit tested and is treated as deliverable code - creatCmdActs and createCmds

NCR ID: ECSed02456
Software: PAS-B
Title: FpTl Power Usage not showing usage correctly
Severity: 2
Problem: Power usage representation on the timeline is not correct. Having scheduled an activity to represent power usage the power usage stayed as a flat line over the time frame of that activity. Power usage should have been shown as increasing.

NCR ID: ECSed02471
Software: RCM-B
Title: FOS/NCC Communication via XDR

Severity: 2
Problem: For the purposes of integration and test, this INCR should be classified as an enhancement. Currently, the RCM NCC Ground Manager process uses the FOS IPC mechanism to successfully communicate with the NCC Unit Test Driver and support integration and test efforts as needed. The RCM NCC Ground Manager will, however, need to communicate with the NCC as early as September 1, 1996 using the XDR format. XDR is not currently supported by the FOS IPC solution. When the RCM NCC Ground Manager software is modified to use XDR, the NCC Unit Test Driver will also require the upgrade so that integration and test efforts are possible between now and September 1.

NCR ID: ECSed02487
Software: FOS
Title: Use of 'hardcoded' variables will not support multi-mission/mode req
Severity: 2
Problem: The use of environment variables and start-up script command line arguments specifying a spacecraft id (AM-1) or a mode id (operational, test, training) will not support multi-mission and multi-mode system requirements.

Level 4 Requirements:

F-FOS-00030
F-FOS-00035
F-FOS-00040

NCR ID: ECSed02488
Software: FOS Common S/W
Title: Use of 'hardcoded' communication port assignments
Severity: 2
Problem: The use of hardcoded communication port assignments should be replaced with references to the FOS Services file(s) (for port assignments reserved for well known services or for multi-cast port assignments) or queries to the FOS Name Server (for point-to-point assignments registered for dynamic services).

This NCR is related to ECSed02752.

NCR ID: ECSed02645
Software: DMS
Title: FileMetaData doesn't return status
Severity: 2
Problem: The FileMetaData server doesn't return a status to indicate if files have been stored successfully or not. If they are not stored successfully then these files will not get archived. The user should be made aware of this situation.

NCR ID: ECSed02702
Software: DMS
Title: RCM NccGroundMgr Connection to Archiver
Severity: 2
Problem: The NccGroundMgr Archiver Proxy lost its connection to the Ground Telemetry Archiver when attempting to send a message to be archived.

NCR ID: ECSed02752
Software: FOS Common
Title: Registering and retrieving from the Name Server correctly
Severity: 2
Problem: Processes need to register with the Name Server with at least the process name, the spacecraft ID and the process type (DEV, INT, OPS, TEST). Lookups from the Name Server by processes need to be requested based on the above three criteria at a minimum.

NCR ID: ECSed02757
Software: FOS Common S/W
Title: The CDE Window Manager should NEVER be used to test FUI Applications
Severity: 2
Problem: The CDE Window Manager (Common Desktop Environment) is a different Window Manager than Motif. FUI has no requirements to work under CDE. FUI code is required to work under Motif. All FUI developers code and test under Motif. FUI developers have noticed several differences in how applications behave under CDE vs. Motif. Since FUI has neither the time nor the requirements to make their applications run under CDE, all testing should be performed under Motif. If an INCR is generated under CDE, against FUI, FUI will request that the problem be proven to exist under Motif before excepting the INCR. If, at some time in the future, FUI is given requirements (a big CCR) to work under CDE, then FUI code will be upgraded to work correctly under CDE.

NCR ID: ECSed02805
Software: PAS-B
Title: FpTl Timeline - user resources not applied to timeline
Severity: 2
Problem: Selected User Setup/Resources - and chose the resources I wanted to have on the timeline. Selected Apply & Ok. The resources selected were not applied to the timeline.

NCR ID: ECSed02810
Software: SYS
Title: The use of process type & mode are different between subsystems-EndPt
Severity: 2

Problem: CMS uses OP_ENV to set the process type when registering with the name server. OP_ENV is set in the FosEnvVars file to indicate, dev, int, ops, test, training, etc. The ground script controller is looking for a process type equal to 3. I don't know what process type means to the ground script controller and the parameter server The parameter server uses process mode to indicate, ops, test, training, etc. using numeric values.

This NCR is related to ECSed02488 and ECSed02752.

NCR ID: ECSed02821
Software: DMS
Title: Proxy needs to be asynchronous for GUI use
Severity: 2
Problem: The FdDbTd proxy does an asynchronous send. Within a GUI process, communications are required to be asynchronous after the window is managed.

NCR ID: ECSed02834
Software: FUI - B
Title: Incorrect Syntax check result
Severity: 2
Problem: When I did a Syntax check by using the CheckProcedureSyntax function of the FuCLParser class, I got a valid result for "CV ONtn" which is not a valid statement.

NCR ID: ECSed02856
Software: DMS
Title: Needs to add telemetry limits and states to PidOdfl.O
Severity: 2
Problem: The Directive Builder is required to show the telemetry limits and states to the user. But, the Odf Directive Builder currently used does not include those data elements. The class FoUpParamData needs to be modified to include the telemetry limits and states and PidsOdfl.O needs to be rebuilt so that the Directive Builder could display the telemetry limits and states.

NCR ID: ECSed02908
Software: FOS
Title: Inconsistent methods for finding Odf files.
Severity: 2
Problem: In order to determine the proper Odf file within a multi mission environment it is necessary to combine an environment path name (ie. ops, test, dev) with a space craft id (i.e., AM1, PM1). Currently

NCR ID: ECSed02935
Software: FUI-B

814-RD-007-002

Title: EC must automatically update its page list when new pages are created
Severity: 2
Problem: Currently, a new page definition (created via the Display Builder) is not recognized by EC until the process is restarted.   A manual workaround using a script generates the new pageUser.dat file, but EC has no way of re-reading this file once it has been started.

NCR ID: ECSed02975
Software: TLM
Title: Decom Is Using 20+% Of The CPU
Severity: 2
Problem: Decom on the Real-Time Server and the User Station has been using over 20% of the CPU once the packet generator is turned on. If two packet generators are running, then the two Decom processes eat up 40+% of the CPU. Here is output from a test:

```
sneezer{fosint2}1: ps aux
USER     PID %CPU %MEM  SZ  RSS TT     S   START  TIME
COMMAND
fosint2   9272 19.8 11.224352 6996 pts/3    R 15:43:15  7:15 FtDcDecom -sid 100
-sc am1 -ttype 3 -ctype 0 -chtype 2 -rate 1
fosint2   9268 19.4 14.825864 9256 pts/3    R 15:43:14  7:59 FtDcDecom -sid 100

```

NCR ID: ECSed03039
Software: FUI-B
Title: Proc Bldr flags valid syntax errors on the line following the error.
Severity: 2
Problem: Procedure Builder fails its syntax check when ther are no apparent errors.

NCR ID: ECSed03208
Software: RCM
Title: Can not archive GCMR messages.
Severity: 2
Problem: During GCMR processing, after entering the first GCMR directive, the Event
Display displayed: NCC Telemetry Archiver detected data dropout.   From this point
on, whenever FgGmNccGroundMgr tried to archive a GCMR message, the Event
Display displayed: FoIpCommExcept was caught, socket error, error = broken pipe.

NCR ID: ECSed03302
Software: FOS Common
Title: Ctlr-Z kills processes
Severity: 2
Problem: When hitting control-z all processes that are running are killed. FoUt incorrectly
installs a signal handler for SiGSTP which causes processes to die if the user intends
to stop it

NCR ID: ECSed03309
Software: FUI-B
Title: Removing multiple items from listbox is slow
Severity: 2
Problem: Removing large numbers of parameters from listbox forces screen redraws for each
item removed. This is time consuming

NCR ID: ECSed03310
Software: FOS Common
Title: Parameter monitor slows up dynamic page display
Severity: 2
Problem: Dynamic page takes more than 1 minute to appear because every parameter monitor
must read in ~640K XDR file. Since a Dynamic Page may have multiple parameter

monitors, this initialization degrades th Consider using a metafile, so that PM's may determince the type of a parameter from a single file associated with a given spacecraft

NCR ID: ECSed03359
Software: FUI-B
Title: Unintended Parameter Selection
Severity: 2
Problem: In "Analysis Telemetry Selector" window, user must de-select all entries in "Available Parameter" List, otherwise they will be reselected.

NCR ID: ECSed03375
Software: FUI-B
Title: Cannot delete times
Severity: 2
Problem: Cannot delete selected times in "Analysis Request Builder" window.

NCR ID: ECSed03383
Software: DMS-B
Title: No Data Base Option
Severity: 2
Problem: F-RMS-00035 The EOC Operator is uanable to specify a database, other than the Default.

NCR ID: ECSed03384
Software: FUI-B
Title: Limited Data Set Names
Severity: 2
Problem: Only one data set name allowed in "Analysis Request Builder" window. User should be prompted for a different data set name for each time specified.

NCR ID: ECSed03438
Software: DMS
Title: Parameter Picker Window Can't Pick Parameters
Severity: 2
Problem: The selection Filter of the Parameter Picker is black cannot pick parameters to fill onto page display.

NCR ID: ECSed03440
Software: DMS/FUI-B
Title: Alarm Msg no filtering & Display'
Severity: 2

Problem: Currently, alarm messages are no different than non-alarm messages and no way to filter them via event filter options.

NCR ID: ECSed03442
Software: FUI/DMS
Title: Event Display filtering option for ops,test and training'
Severity: 2
Problem: There is currently no filtering option for ground systems (i.e. ops, test, or training)

NCR ID: ECSed03453
Software: FUI-B
Title: 'Save As' Feature w/Proc Builder
Severity: 2
Problem: Default Directory is /fos/test/am1/scripts/setup Should be a data proc directory not startup.

NCR ID: ECSed03471
Software: HW
Title: Raid data transfer rate
Severity: 2
Problem: Raid data transfer rate is less than 20 MB. The requirement is 20 MB transfer rate but the disks are rated for 10 MB.

NCR ID: ECSed03472
Software: HW
Title: RAID hot-swap
Severity: 2
Problem: The RAID fan and controllers for the disk-array are not hot-swapable.

NCR ID: ECSed03496
Software: FUI
Title: Display Builder Exit on Return
Severity: 2
Problem: Display Builder exits if the return button is hit in the selection area of the file selection if a file is not selected.

NCR ID: ECSed03499
Software: FUI
Title: Parameters Truncated in available parameter list
Severity: 2
Problem: In Data Source Dialog Window, the parameters included in the available parameters columns are cut off; that is, the last characters in the parameter name are truncated.

NCR ID: ECSed03500
Software: FUI-B
Title: Selection Filter/Deselection takes too long
Severity: 2
Problem: Deselection of a filtered subsystem in the selection filter takes too long. It has taken up to 10 minutes at times if the number of parameters listed in the available parameters text area is large.

NCR ID: ECSed03502
Software: FUI-B
Title: Process PMS Does Not Make Pages Active
Severity: 2
Problem: ProcessPms copies newpages to active pages but the pages still don't come up when called. They also do not appear under TlmWins.

NCR ID: ECSed03505
Software: FUI-B
Title: No Error for Bringing up an Illegal Page
Severity: 2
Problem: Display Builder will try to open files even if they are not display pages. No error message is received. The Display Builder window resizes to a small size.

NCR ID: ECSed03509
Software: FUI-B
Title: Event Display drop-out after resize
Severity: 2
Problem: The event display was widened when displaying seven events (for generating a DAS). When the resize operation was complete, the event display contained only the first four events. New events were not displayed.

NCR ID: ECSed03527
Software: FUI-B
Title: Parameter Picker doesn't reset
Severity: 2
Problem: When building a new page, the data source resets but the parameter picker still displays the last group of mnemonics filtered on. This group also stays even if a different data source is selected.

NCR ID: ECSed03900
Software: FUI
Title: Time Selector accepts a starttime the same as the stop time

Severity: 2
Problem: F-ANA-03015 An analysis request should be 1 second or greater. The time selector accepts a 0 second duration.

NCR ID: ECSed03953
Software: FUI
Title: Cmd contrl windw crashes when user attempts to killground script
Severity: 2
Problem: When user attempts to kill a ground script using kill button on the cmd control window it crashes the window, user attempts to bring up a new window and a cmd monitor window appears. When a second user attempts to take command the ground script controller crashes and this causes an error within the FOP procsss and user cannot bring up a command control window.

NCR ID: ECSed03959
Software: FOS Common S/W
Title: FoIp Motif Notifier Is Using Too Much CPU
Severity: 2
Problem: The FoIp Motif Notifier is very inefficient. It is directly responsible for 20-30% CPU utilization in FUI processes that are relatively inactive (i.e. not sending or receiving lots of data/classes). This is a well known and understood problem that was pushed off until a late

NCR ID: ECSed03960
Software: FOS Common S/W
Title: FoIp Uses A Very CPU Intensive Class Flattening And Restoring Method
Severity: 2
Problem: Currently, FoIp is using a very ineffecient method to send classes, i.e. Portable ASCII streams. No consideration is being made as to whether the message is being sent to the same kind of H/W and O/S conversion to Portable ASCII by the sender, and eliminate the conversion from Portable ASCII by the receiver. Since most of our communication is between processes on the same H/W and O/S, much less the same machine, this should provide a significant speed increase.

NCR ID: ECSed03961
Software: FOS Common
Title: Some Functions in the FoTm lib. cause a core dump.
Severity: 2
Problem: The use of the floor() function in FoTm Functions results in a core dump on the DEC.

NCR ID: ECSed03962
Software: FUI

Title: Selection Filter bug when items are selected before hitting O.K.
Severity: 2
Problem: The selection filter window will not work properly if the user selects an item in the "selected" list and then hits O.K.   After that, the window behaves incorrectly.

NCR ID: ECSed03967
Software: FUI/FOS
Title: Diplay page telemetry update rate is slow
Severity: 2
Problem: Telemetry update on display pages is very slow. Ran the telemetry packet generator at 6 seconds between packets and the display page was still slow
note: when analyzing this NCR, see NCR #3959

NCR ID: ECSed03982
Software: PAS-B

NCR ID: ECSed03986
Software: SYSTEM
Title: DEC byte addressing "little indian first"
Severity: 2
Problem: When doing a hex dump (Unix od -x) of a command data block log file I realized that the DEC machine was using even byte addressing-least significant byte first, causing each pair of bytes in the dump to be swapped. I am informed that the DEC is supposed to be configurable to address the way the rest of the world does it. This could have serious impact to the functioning of software on a DEC machine. If it is indeed possible to select "big indian first" addressing, it should be done as soon as possible to minimize any possible impact to FOS software when running on a DEC machine.

NCR ID: ECSed03999
Software: TLM
Title: Out-of-Limits (red) parameters go static
Severity: 2
Problem: Telemetry parameters whose values are Out-of-Limits (red) turn static, and the row color changed from red to white, even though the same Out-of-limits (red) values are continually being ingested. In the attached TLM decomm page, CHD_VR_PWRB_AYT_2V, a high red value of 220,000 is continually ingested. After several cycles however, the parameter changes to static ("S") and the row color changes to white.

Note: related to NCR 2690

NCR ID: ECSed04009
Software: SYSTEM
Title: Isolate the mini-EOC.
Severity: 2
Problem: If possible, the mini-EOC should be put on its own subnet to prevent receiving multicast messages from the second floor. This disrupted testing for two consecutive days because it was crashing the User Stations in the mini-EOC and we couldn't test.

Title: ATC load name incorrectly specified
Severity: 3

Problem: Selected das for day 216. The load name indicated 218. This could be related to the RW time utility conversions. This was generated on day 215(?) (8/1/96) We should probably be using the DAS id /version number. When multiple DASs are sent to cms the load files will be overwritten, because they will have the same name

NCR ID: ECSed02819
Software: DMS
Title: DMS Dependent On FUI and TLM Private Classes For ODF Generation
Severity: 3
Problem: As a result of the "re-VOBing" effort, it was uncovered that DMS is dependent on both FUI and TLM private classes for some ODF generation. This goes against the rules that any code/class that is shared by more than one subsystem is common code, and must therefore reside in the common VOB. Some action must be taken by DMS, FUI and TLM to eliminate these dependencies. It should be noted that in both of these cases, these ODF files are used exclusively by either FUI (SelectionFilter ODF) or TLM (Decom ODF).
There are two possible solutions:

1) The subsystem takes over responsiblility for the code to generate the ODFs. This would eliminate DMS's dependency on the other subsystems and give the subsystem's control of their own ODF files.
2) The FUI and TLM private code is moved to the Common Area. One thing to keep in mind is that this code is not really common. The only reason DMS must access this code is to generate the ODFs, which really means pulling the date pieces of data out of SYBASE. The ODFs are used exclusively by FUI or TLM. So this is not really a open and stuff common code issue.

Software: FUI-B
Title: Environment Controller Does Not Use $BIN_DIR When Starting Processes
Severity: 3
Problem: Environment Controller does not use the $BIN_DIR path when starting executables. As a result if EC is not started in the directory where the processes reside or the directory is not the "path" then EC will not be able to start the application. A simple solution to this problem is for EC to use $BIN_DIR when starting the executables. This is not critical because $BIN_DIR is automatically added to the "path" when

FosEnvVars is sourced when running the startup scripts. However, that is a work around to EC's problem.

Title: FpGs Core Dumps Upon Parm Modification, Schedule, Parm Modification
Severity: 3
Problem: Run the General Scheduler and choose an activity on a resource that contains a modifiable parameter (preferably an integer or float value). Go to the Command Parameters... option beneath the Edit menu. Select the command containing the modifiable parameters and then select one of the parameters in the Parameters window in the lower left corner. Modify this parameters value by specifying a valid value in the Current Value text field beneath the Parameter Type label. Hit the Apply button first and then hit the Ok button. The Parameters window disappears. Now schedule the activity containing the command with the modified parameter. Go back to the Command Parameters window and modify a parameter within the same command as before. As soon as the Apply button and Ok button are pressed the General Scheduler dies.

Workaround: After scheduling the activity with the command that contains the modified parameter, do not immediately update a parameter field for the same activity. Schedule or modify a command parameter for a different activity.

Title: No Dialog MSG w/ Non-impact option
Severity: 3
Problem: During the scheduling option in a "non-impact" mode , a msg should appear saying what happened to the scheduled activity

NCR ID: ECSed04427
Software: FUI
Title: Event display timeline update is delayed
Severity: 3
Problem: When runnig the event driver, there is a delay of "one cycle" in updating the event display graphic timeline. The attached snap shows 7 text events at time 16:06:15. But the graphic timeline show only one event, which corresponds to the highlighted CMD event. (the first event in the sequence of 7 events). eventually the other 6 events were displayed on the graphic time line only after another event was introduced

NCR ID: ECSed04431
Software: PAS
Title: Error dialog box for activity scheduling has MsgDialogShell as title
Severity: 3

Problem: Error dialog box has the wring title. "error" should be the title

NCR ID: ECSed04436
Software: FUI
Title: Times from the pair time selector are different than the selected tim
Severity: 3
Problem: The time selected in the pair time selector window was 19:00:00. When the user clicked OK, and viewed the time in the selected time table of the analysis request builder, the stop time was 18:59:59

NCR ID: ECSed04441
Software: FUI
Title: Stats Rate in selected param field is displayed in seconds only
Severity: 3
Problem: When the user selectes parameters for a statistics request, the selected parameters table displays the rate in seconds. 1 day equals 86400 seconds. This should be displayed in Days, Hours, Minutes & seconds.

NCR ID: ECSed04442
Software: ANA
Title: Incorrect err msg when saving an incomplete analysis reqst
Severity: 3
Problem: The user tried to save an analysis request without submitting times. Received an error message: Requests cannot be sent, start/stop times must be selected. Expected to see an error message indicating that request could not be saved rather than sent.

NCR ID: ECSed04443
Software: FUI
Title: Real-time graphs can't resize the graph display
Severity: 3
Problem: The size of the graph can not be changed. The user should be able to change the physical size of the graph.

NCR ID: ECSed04444
Software: FUI
Title: Real-time graphs can't specify graph length
Severity: 3
Problem: The length of the graph can not be specified. The graph continues to scroll. The user can never go back to see the beginning of the graph after a certain period of time.

NCR ID: ECSed04445

Software: FUI
Title: Real-time tables - table is too big for window
Severity: 3
Problem: The user can't see the entire table unless the telemetry window is maximized. The scroll bars can't be used. The table should shrink down with the window.

NCR ID: ECSed04447
Software: FUI
Title: Wait 10 directive does not recognize suspend directive
Severity: 3
Problem: User entered a wait10 directive as part of a groundscript. User suspended the ground script while the system was in a wait state the ground script execution resumes automatically after the specified wait time, instead of waiting for the user to initiate the resume option

NCR ID: ECSed04450
Software: DMS
Title: No way to exit stored command indicator
Severity: 3
Problem: The stored cmd indicator field is supplied by the FOT. There is no way to set stored command indicator so it will pass validation

NCR ID: ECSed04453
Software: ANA
Title: Badly worded event msg upon analysis request submittal
Severity: 3
Problem: When submitting analysis request recieved msgs string x was created instead of meaningful event msg

NCR ID: ECSed04455
Software: ANA
Title: Number of simultaneous requests has not been determined
Severity: 3
Problem: The number of simultaneous requests that a user cab submit has not been determined F-ANA-08010

NCR ID: ECSed04457
Software: FUI
Title: Only one spacecraft to test filtering capabilities
Severity: 3
Problem: All filter capabilities can't br tested because there is only one spacecraft to filter on.
F-FUI-03205
            03215

03220

NCR ID: ECSed04459
Software: HRD
Title: Data server processors shall be individual
Severity: 3
Problem: There is only one data server in the EOC. Unable to compare it with any other data server

NCR ID: ECSed04460
Software: HRD
Title: H9A10 cabinet panel do not remove
Severity: 3
Problem: Unable to locate in vendor documentation that side panels remove. Unable to test removal due to cabinet placement

Appendix A. Build Instructions

This appendix describes the necessary installation/build procedure which will be used for installing the FOS custom software released by the CM at the various DAACs. This procedure is based on the assumption that the necessary tar files have been copied (using ftp) from the CM directory to the directories on the FOS machine where the installation is to be done.

A.1 Build Process

The FOS custom software build process is performed in order to generate a new set of executables. These files are subsequently loaded into specific workstations and file servers in order to meet the functional requirements of the FOS program.

The build process inputs consist of the following:

1. ClearCase views for each sub-system

2. The correct file versions dictated by the views' configuration specification

3. The pertinent NCRs that were addressed by the build

Scripts are invoked in order to perform the builds. There are two ways of actually doing this. One is by using an enhanced version of ClearCase's Graphical User Interface (GUI). The other is by keying in commands and executing them in a Command Line Interface (CLI). The GUI performs the same commands as the CLI, however the GUI executes the scripts by pointing and clicking a mouse, rather than keying in all of the detail UNIX and Cleartool commands.

The FOS custom software is partitioned into ten (10) areas. The first partition is known as FOSCOMMON, and is comprised of common code that is referenced by the remaining nine subsystems. The nine subsystems are:

- Analysis Subsystem (ANA)
- Command Subsystem(CMD)
- Command Management Subsystem (CMS)
- Data Management Subsystem (DMS)
- FOS User Interface Subsystem (FUI)
- Planning and Scheduling Subsystem (PAS)
- Real-Time Contact Management Subsystem (RCM)
- Resource Management Subsystem (RMS)
- Telemetry Subsystem (TLM)

FOSCOMMON is built *first*. DMS is built *last*. Other than these two constraints, the build order is arbitrary. Each subsystem is built by performing the following five steps:

- Set the view
- Set the path to the subsystem
- Specify the target platform (Sun or DEC)
- Source the .buildrc file

- Enter `Clearmake -C GNU -V`

The CLI interface commands are located in the /scripts/ area. The xclearcase GUI enhanced menu, Configuration Management/Change Control (CM/CC), performs all of the housekeeping for building FOS custom software.

A.2 GUI Build Process

The GUI build process is described below:

1. Ensure that the cm-cc.grp menu file resides in /home/$USER/grp path

2. Run "xclearcase" from a licensed node

    voyager{user}6: xclearcase &

    Using the menu, select the view needed for building FOSCOMMON, expand the menu to fill the monitor by clicking the larger upper right corner button. Ensure that the subsystem make.targets file has the target platform set.

3. Click on "CM/CC"

4. Click on "Build FOS S/W"

5. Click on "Foscommon"

6. Display the transcripts window to provide visibility to the FOSCOMMON build.

The FOSCOMMON build is complete when the build-foscommon script finishes. For each of the remaining nine subsystems, perform the following steps:

7. Using the menu, select the view needed for building the next subsystem

8. Ensure that the subsystem make.targets file has the target platform set

9. Click on "CM/CC"

10. Click on "Build FOS S/W"

11. Click on the next subsystem

12. Display the transcripts window to provide visibility to the subsystem build. The FOSCOMMON build is complete when the build-subsystem script finishes

A record of the build is saved into a logfile, named /home/$USER/logfile. This file can be saved and printed to record the build process for Quality Assurance purposes.

A.3 CLI Build Process

The CLI build process is described below:

1. Build FOSCOMMON:

Enter the command: `cleartool setview {appropriate view tag}`

2. Set the correct path for FOSCOMMON: `cd /ecs/formal/fos/foscommon2`

3. Ensure that the subsystem make.targets file has the target platform set. Enter the command: `source .buildrc`

4. Enter the command: `Clearmake -C GNU -V`

FOSCOMMON build is complete when the Clearmake finishes. For the remaining nine subsystems, perform the following steps:

A.3.1 Build ANA

1. Enter the command:

   `cleartool setview {appropriate view tag}`

2. Set the correct path for ANA: `cd /ecs/formal/fos/ana2`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

ANA build is complete when the Clearmake finishes

A.3.2 Build CMD

1. Enter the command:

   `cleartool setview {appropriate view tag}`

2. Set the correct path for CMD: `cd /ecs/formal/fos/cmd2`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

CMD build is complete when the Clearmake finishes

A.3.3 Build CMS

1. Enter the command:

   `cleartool setview {appropriate view tag}`

2. Set the correct path for CMS: `cd /ecs/formal/fos/cms`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

CMS build is complete when the Clearmake finishes

A.3.4 Build FUI

1. Enter the command:

    `cleartool setview {appropriate view tag}`

2. Set the correct path for FUI: `cd /ecs/formal/fos/fui3`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

FUI build is complete when the Clearmake finishes

A.3.5 Build PAS

1. Enter the command:

    `cleartool setview {appropriate view tag}`

2. Set the correct path for PAS: `cd /ecs/formal/fos/pas`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

PAS build is complete when the Clearmake finishes

A.3.6 Build RCM

1. Enter the command:

    `cleartool setview {appropriate view tag}`

2. Set the correct path for RCM: `cd /ecs/formal/fos/rcm3`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

RCM build is complete when the Clearmake finishes

A.3.7 Build RMS

1. Enter the command:

   ```
   cleartool setview {appropriate view tag}
   ```

2. Set the correct path for RMS: `cd /ecs/formal/fos/rms2`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

RMS build is complete when the Clearmake finishes

A.3.8 Build TLM

1. Enter the command:

   ```
   cleartool setview {appropriate view tag}
   ```

2. Set the correct path for TLM: `cd /ecs/formal/fos/tlm2`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

TLM build is complete when the Clearmake finishes

A.3.9 Build DMS

1. Enter the command:

   ```
   cleartool setview {appropriate view tag}
   ```

2. Set the correct path for DMS: `cd /ecs/formal/fos/dms4`

3. Ensure that the subsystem make.targets file has the target platform set

4. Enter the command: `source .buildrc`

5. Enter the command: `Clearmake -C GNU -V`

DMS build is complete when the Clearmake finishes

The entire Build process is complete when all the subsystems have successfully built after the FOSCOMMON. It is now possible to begin the Installation process.

This page intentionally left blank.

Appendix B. Installation Procedure

This section outlines the installation procedure for the FOS custom software.

1. Untar tar file. The command is: `tar xvf` file.tar
2. Uncompress file. The command is: `uncompress file.tar.Z`
3. Copy files at the directory level.

814-RD-007-002

This page intentionally left blank.

Appendix C. Special Operating Instructions

Along with the formal documents, FOS software is delivered with README files for most of the subsystems. These files are located in the doc directory for each subsystem. The following disclaimer applies to these files.

These README files have not been verified. They do, however, contain valid and useful information concerning the setting of environment variables and compile instructions. However, should there be any errors or discrepancies between the instructions contained in the README files and the delivered documentation, the delivered documentation should take precedence.

This page intentionally left blank.

Appendix D. User Feedback Procedures

Feedback from the Users

Collating user feedback is one of the primary goals of FOS. Collected user feedback will be provided directly to the subsequent release teams for further assessment and action. Several feedback channels will be provided for effective collection of data.

URDB
Link to URDB will be provided on the FOS WEB page which is under construction.

Bulletin board
FOS bulletin board server is located on http://newsroom.hitc.com/fos/fos.html.

Non Conformance Reports (NCR)

NCRs for FOS are submitted using the FOS NCR WEB page (URL http://newsroom.gsfc.nasa.gov/sit/ddts/ddts.html). This page provides a direct link to the EDF DDTS database which tracks the FOS NCRs. The access is allowed only to authorized ECS users. The procedure for submitting NCRs is explained in detail in the Project Instruction (PI) SD-1-014, Software Nonconformance Reporting.

Feedback to the users

Keeping the users of the system informed about the status and operational aspects of the system is also as important as collecting feedback from the users. Consistent with this approach, users will be able to get FOS data from the following channels:

Bulletin board
Information will be posted to the bulletin board at http://newsroom.hitc.com/fos/fos.html.

FOS WEB Page
FOS WEB Page (under construction) will also provide useful information including access to the FOS documentation on-line.

This page intentionally left blank.

Abbreviations and Acronyms

ANA   Analysis Subsystem

CC   Change Control

CCB   Change Control Board (Hughes Convention)

CCR   Configuration Change Request

CCSDS   Consultative Committee for Space Data Systems

CDRL   Contract Deliverable Requirements List

CERES   Clouds and Earth Radiant Energy System

CI   Configuration Item

CLI   Command Line Interface

CLTU   Command Link Transmission Unit

CM   Configuration Management

CMD   Command Subsystem

CMS   Command Management Subsystem

COTS   Commercial off-the-shelf Software

CSMS   Communications and Systems Management Segment (ECS)

CRC   Cyclic Redundancy Code

CSC   Coordinate System Conversion

CSCI   Computer Software Configuration Item

CSS   Communication Subsystem

DAAC   Distributed Active Archive Center

DCE   Distributed Computing Environment

DCN   Document Change Notice

DDTS   Distributed Defect Tracking system
